COMPREHENSION

Directions for the following 15 (fifteen) items: Read the following passages and answer the items that follow.

PASSAGE-I

Those responsible for teaching young people have resorted to a variety of means to make their pupils learn. The earliest of these was the threat of punishment. This meant that the pupil who was slow, careless or inattentive risked either physical chastisement or the loss of some expected privilege. Learning was thus associated with fear. At a later period, pupils were encouraged to learn in the hope of some kind of reward. This often took the form of marks awarded for work done and sometimes of prizes given at the end of the year to the best scholar. Such a system appealed to the competitive spirit, but was just as depressing as the older system for the slow pupil.

10

In the nineteenth century sprang up a new type of teacher, convinced that learning was worthwhile for its own sake and that the young pupil's principal stimulus should neither be anxiety to avoid a penalty nor ambition to win a reward, but sheer desire to learn. Interest, direct or indirect, became the keyword of instruction.

- 91. The educational system which caused fear in the pupil's mind was based on:
 - (a) rewards
 - (b) labour
 - (c) punishment
 - (d) competition
- 92. The system based on rewards satisfied all except:
 - (a) the slow pupil
 - (b) the very intelligent pupil
 - (c) the laborious pupil
 - (d) the casual pupil

- 93. The system which appealed to the competitive spirit in the pupils was largely based on:
 - (a) punishment
 - (b) marks
 - (c) chastisement
 - (d) cash prizes

PASSAGE-II

On a surface which is free from obstacles, such as a clear road or a path, only two or three species of snakes can hope to catch up with a human being, even if they are foolish to try. A snake seems to move very fast but its movements are deceptive. In spite of the swift, wave-like motions of its body, the snake crawls along the ground at no more than the speed of man's walk. It may, however, have an advantage inside a jungle, where the progress of a man is obstructed by thorny bushes. But in such places, the footsteps of a man are usually more than enough to warn snakes to keep away. Although they have no ears of the usual kind, they can feel slight vibrations of the ground through their bodies, and thus get an early warning of danger.

- 94. The snake has an advantage over men inside a jungle, because there:
 - (a) it can crawl faster.
 - (b) it gets advance warning.
 - (c) man's movement is obstructed.
 - (d) it is dark inside a jungle.
- 95. What helps the snakes to receive advance warning is their sensitivity to:
 - (a) obstacles in the path.
 - (b) smell of other beings.
 - (c) sounds made by other beings.
 - (d) movements of other beings.

PASSAGE--III

This rule of always trying to do things as well as one can do them has an important bearing upon the problem of ambition. No man or woman should be without ambition, which is the inspiration of activity. But if one allows ambition to drive one to attempt things which are beyond one's own personal capacity, then unhappiness will result. If one imagines that one can do everything better than other people, then envy and jealousy, those twin monsters, will come to sadden one's days. But if one concentrates one's attention upon developing one's own special capacities, the things one is best at, then one does not worry over much if other people are more successful.

- 96. Which one of the following alternatives brings out the meaning of 'to have a bearing upon' clearly?
 - (a) to have an effect on
 - (b) to carry the weight on oneself
 - (c) to put up with
 - (d) to decrease friction

PASSAGE--IV

An earthquake comes like a thief in the night, without warning. It was necessary, therefore, to invent instruments that neither slumbered nor slept. Some devices were quite simple. One, for instance, consisted of rods of various lengths and thicknesses which would stand up on end like ninepins. When a shock came it shook the rigid table upon which these stood. If it were gentle, only the more unstable rods fell. If it were severe, they all fell. Thus the rods by falling and by the direction in which they fell, recorded for the slumbering scientist, the strength of a shock that was too weak to waken him and the direction from which it came.

But, instruments far more delicate than that were needed if any really serious advance was to be made. The ideal to be aimed at was to devise an instrument that could record with a pen on paper the movements, of the ground or of the table, as the quake passed by. While I write my pen moves but the paper keeps still. With practice, no doubt, I could, in time, learn to write by holding the pen still while the paper moved. That sounds a silly suggestion, but that was precisely the idea adopted in some of the early instruments (seismometers) for recording earthquake waves. But when table, penholder and paper are all moving how is it possible to write legibly? The key to a solution of that problem lay in an everyday observation. Why does a person standing in a bus or train tend to fall when a sudden start is made? It is because his feet move on, but his head stays still.

 - (b) expensive
 - (c) not sturdy
 - (d) not sensitive enough

- 102. Why was it necessary to invent instruments to observe an earthquake?
 - (a) Because an earthquake comes like a thief in the night.
 - (b) To make people alert about earthquakes during their conscious as well as unconscious hours.
 - (c) To prove that we are technically advanced.
 - (d) To experiment with the control of man over nature.

- 103. A simple device which consisted of rods that stood up on end like ninepins was replaced by a more sophisticated one because it failed:
 - (a) to measure a gentle earthquake.
 - (b) to measure a severe earthquake.
 - (c) to record the direction of the earthquake.
 - (d) to record the facts with a pen on paper.
- 104. The everyday observation referred to in the passage relates to:
 - (a) a moving bus or train.
 - (b) the sudden start of a bus.

 - (a) the pen that should move just as it moves when we write on paper.
 - (b) the pen that should stay still and the paper should move.
 - (c) both pen and paper that should move.
